

This list has been compiled using the UCAS website (www.ucas.com) and includes all the specialist first degree courses in microbiology and biotechnology run by UK universities. However many also offer joint courses in microbiology with other scientific subjects or languages. You should consult the prospectuses or websites of the universities concerned to check all the available options and to obtain details of the course contents. It is also possible to study microbiology modules as part of a more general biology course (such as applied biology, biology, biological science, bioscience). Whilst every care has been taken in producing this leaflet, the accuracy of the information cannot be guaranteed and it may be subject to change.
